PROFESSIONAL SUMMARY

Software engineer with 2 years of experience in full stack development, APIs, automation, and production support. Apply a forward deployed engineering (FDE) approach through stakeholder discovery and end-to-end delivery. Use AI-assisted development with code validation, security controls, and end-to-end testing.

TECHNICAL SKILLS

Development: C#, .NET, ASP.NET MVC, React, TypeScript, Python, FastAPI, REST APIs
Data and integration: SQL Server, T-SQL, PostgreSQL, RabbitMQ, Ocelot API Gateway; SAP SuccessFactors, NetSuite, Oracle E-Business Suite, Salesforce
Delivery and operations: Git, GitHub Actions, CI/CD, IIS, on-premises Windows servers, NSSM, Task Scheduler, SFTP, SMTP, Microsoft Entra ID (Azure AD), Agile

PROFESSIONAL EXPERIENCE

Engineer | Altimetrik (formerly SLK) | October 2024 – Present
Application modernization and production ownership

- Independently modernized Shift Roster, a workforce scheduling application supporting shift allowances and transport booking, from ASP.NET MVC to React/TypeScript and .NET APIs in approximately 2 months; released to production in September 2026.
- Support 200+ active users and shift-allocation data for 1,500–2,000 employees, with 56K+ employee-shift records in the first month after release.
- Redesigned the relational database and enabled self-service configuration of shift timings, allowances, payroll freeze periods, and report criteria, removing developer involvement for supported changes; enforced Azure AD group-based authorization in the UI and API.
- Implemented per-employee publish isolation and version-conflict detection, allowing successful roster saves to stand when another employee fails; enabled failed external syncs to be retried without republishing roster data.
- Built 3 synchronization services for HR, transport, and scheduled reconciliation; combined real-time updates with recovery syncs, idempotency keys, post-processing acknowledgements, retries, alerts, and logged reprocessing.
- Assumed ownership of 11 Python automations, including finance, project synchronization, and background verification workflows; maintained RabbitMQ producer-consumer integrations with scheduled and API-triggered execution.
- Reduced VMS query execution time from 5–10 minutes to 2–3 minutes, verified through stored-procedure execution results, by optimizing complex joins; improved SQL refresh jobs to address recurring server-overload failures.

Engineering initiatives

- Independently developed Project and Attendance Process APIs for shared live source-system access; implemented asynchronous source fetching and harmonized project data from Oracle EBS and NetSuite through Python/FastAPI.
- Optimized project retrieval with source-side filtering, column selection, and pagination where supported, plus pooled Oracle connections; documented API query parameters and integration workflows for consuming applications.
- Built configurable reports with column selection, filters, and preview-before-export; embedded user guidance and documented architecture and APIs to support adoption and developer handover.
- Built and deployed a CI/CD template generator for repository-specific GitHub Actions YAML aligned with organization build and deployment standards; used it to generate 5 pipelines for Shift Roster components.
- Supported 2 organizational migrations through data, DNS, configuration, and integration changes; migrated employee identifiers from integer to string across affected systems without application downtime.
- Built a Data Health Reconcile Dashboard, ready for deployment, with a Python API and web frontend; enabled source registration, reusable integration templates, and entity/field configuration for reconciliation across systems including SAP, NetSuite, and Oracle EBS.

- Combined build-integrated functional, integration, and data-validation checks with manual workflow testing; reviewed AI-generated code for component reuse, existing-library use, and requirement alignment, removing duplicated logic and unrequested features.

PERSONAL PROJECT

API Test Center | In development | apitestcenter.com — Building an API testing tool; continuing feature development and stabilization.

CERTIFICATIONS AND TRAINING

OpenAI PartnerU / Sana | 7 credentials | Valid through July–August 2027: API Deployment Practitioner; Codex Solutions Practitioner; ChatGPT Deployment Practitioner; ChatGPT Solutions Practitioner; OpenAI Technical Practitioner; OpenAI Consultative Solutions Practitioner; OpenAI Foundational Knowledge.
Python Essentials 1 | Cisco Networking Academy | July 2022 · Python for Data Science badge | IBM | July 2022.
Professional development includes 10+ credentials and course completions across AI, Python, DevOps, Agile, and cybersecurity.

EDUCATION

B.Tech in Computer Science and Engineering | ITER, Siksha O Anusandhan University | 2024 | CGPA: 7.75/10
